Job Description | Business Systems Analyst – Warehouse Management

The **Business Systems Analyst - Warehouse Management** will be responsible to deliver new process implementation, process improvement, report development, configuration updates, system security and support for Manhattan's PKMS warehouse management systems to ensure optimal warehouse efficiencies and performance.

Primary responsibilities:

- Implement, maintain, and support Warehouse Management IT services. Participates in the development of system enhancements for the Central DCs. Development and support of shipping labels, packing lists and other warehouse documents.
- Understand and support the application interface process to/from other ERP platforms
- Maintain working relationships with the application support vendors
- Create and maintain development specifications for the application support vendors
- Serve as subject matter expert for warehouse communications and collaboration within IT
- Supports warehouse related projects and enhancements, systems issues, and hardware/software trouble tickets for multiple locations

Our ideal candidate will possess:

- Minimum of Associate Degree in Information Technology; Bachelor Degree in Information Technology preferred.
- Minimum of 2 years of relevant IT experience
- Extensive experience with Manhattan's PKMS warehouse management system required
- Work experience in a distribution environment strongly preferred
- RPG/CL application development experience strongly preferred
- Good understanding of hardware and infrastructure (LAN, WLAN, scan guns, PCs, Zebra printers)
- JD Edwards ERP system experience related to distribution and inventory management preferred.
